Academic Projects

DESTINATION WEDDING
Tools: PHP,HTML , CSS , JAVASCRIPT
Roles: Hardware Program, Full-Stack web application, Deployment
Project-Description

A destination wedding project involves organizing and planning a wedding ceremony and related events at a location that is often far from the couple’s home. The process typically includes managing all logistical aspects of the event, such as selecting the destination, securing venues, booking accommodations for guests, and coordinating travel arrangements.

Key components of the project are:

- Destination Selection:** Researching and choosing a suitable destination based on the couple's preferences, theme, and budget.
- Legal Requirements:** Ensuring the couple meets the legal requirements for marriage in the chosen location, which may involve permits, documentation, and translation services.
- Venue & Vendors:** Identifying and contracting with local vendors (catering, floral arrangements, photography, etc.) and booking the ceremony and reception venues.
- Guest Experience:** Coordinating travel, accommodations, and activities for guests, often including pre- and post-wedding events.
- Budget Management:** Monitoring costs to stay within the couple’s budget while ensuring a seamless experience.
- Contingency Planning:** Developing backup plans for weather issues, flight delays, or other unexpected challenges.

The overall goal is to create a memorable experience in an exotic or meaningful location, combining a wedding with a travel adventure.

Personal Details

Date of Birth: 30th Dec 2004
Languages Known: English, Hindi and Gujarati
Address: Botad, Gujarat
